Are “healthy” foods making
YOU SICK?

Healthy Foods vs. Foods that are Healthy
for YOU - Know the Difference

Take the first step in **stopping
the vicious cycle today!**

Did **you** know...

Milk doesn't always do a body good, multi-grains aren't healthy for everyone, and an apple a day may not keep the doctor away?

Food sensitivities
may be at the root of **your health issues.**

For people with food sensitivities, foods that are normally considered healthy can cause health issues.

Unlike food allergies, which have immediate and recognizable effects, people with food sensitivities may not realize that the foods they are eating are slowly destroying their health. The symptoms associated with food sensitivities (e.g., depression, joint pain, and insomnia) can occur up to 72 hours after eating, making the connection between the symptom and the food difficult to recognize. While food sensitivities are not life-threatening, they can significantly decrease the quality of your health and life.

Food sensitivities are frequently the result of poor gastrointestinal (GI) health. GI health can be affected by a number of factors including emotional issues, stressful lifestyle, poor diet, repeated illnesses, medications and exposure to toxins. The removal of foods that cause an immune reaction allows your GI tract to heal, relieving the symptoms associated with poor GI health.

You can restore your GI health and improve your quality of life in 3 easy steps using the NEI Nutrition GI Protocol®!

1

Gain Knowledge with Food Sensitivity Testing*

In order to start down the path, you must first identify the foods to which you are sensitive. Food sensitivities cannot be identified with the methods normally used (e.g. blood (IgE) and skin scratch tests), because those tests identify immediate reactions to foods (i.e., food allergies). Food sensitivities are best identified by measuring a special immune protein, immunoglobulin G (IgG), which is associated with a delayed immune reaction. Ask your healthcare practitioner about IgG food testing and learn more about your food sensitivities.

2

Apply Knowledge with a personalized NEI Guided Nutrition Program™

Food sensitivity testing allows your healthcare practitioner to create personalized medical programs for you, using the foods that work best with your body. The NEI Guided Nutritional Program™ (NEI GNP™) guides you to eat the foods that support a healthy GI tract. This approach has been clinically proven to help people suffering from the symptoms of poor GI health.

3

Take Action Using the 3 R's of GI Repair

To truly restore GI health, the health of the intestines must be addressed. The 3 R's (Repair, Reset, and Recolonize) of GI Repair is a systematic, scientific approach to restoring intestinal health that includes:

- A gentle fiber with GI soothing ingredients
- Tissue healing, anti-inflammatory, and antioxidant support
- Friendly bacteria (probiotic) support

* THESE STATEMENTS HAVE NOT BEEN EVALUATED BY THE FOOD AND DRUG ADMINISTRATION. THIS PRODUCT IS NOT INTENDED TO DIAGNOSE, TREAT, CURE, OR PREVENT ANY DISEASE.

Symptoms of Poor GI Health

- Fatigue
- Anxiousness
- Depression
- Bloating
- Difficulty breathing
- Persistent pain
- Recurring illness
- GI complaints
- Headaches
- Insomnia
- Focus and concentration issues
- Joint Pain

Symptoms of poor GI health are widely varied because the health of your GI system (stomach, small intestines, and large intestines) affects the health of other systems in your body, resulting in a vicious cycle.
